EMCORE is a pioneer of innovative RF over fiber solutions for satellite and microwave band communications. EMCORE’s products, featuring Genuine Ortel Technology, transport an ultra-broadband frequency range over high-performance fiber optic links. A wide range of high-dynamic-range applications are supported including satellite antenna remoting and signal distribution, inter- and intra-facility links, site diversity systems, high-performance supertrunking links, electronic warfare systems, radar testing, and much more. EMCORE’s complete line of satellite and microwave components, subassemblies and systems eliminate the distance limitations of copper-based coaxial systems.
Satellite Communications & Wireless Networks

5200 Series 3 GHz and 6.5 GHz High-Performance Fiber Optic Inter-Facility Links

EMCORE’s 5200 Series, 3 and 6.5 GHz Fiber Optic Inter-Facility Links (IFLs) are a high-performance, cost-effective alternative to coaxial cable for 20 MHz to 6500 MHz communications applications. They are a compact, weatherproof fiber optic transmitter and receiver pair for applications where high-performance under demanding conditions is critical.

EMCORE’s fiber optic IFLs function as transparent RF fiber links. These IFLs eliminate the limitations of copper systems by enabling longer transmission distance while retaining the highest level of signal quality. In addition, EMCORE’s fiber optics provide several other significant network advantages, including simplified network design, ease of installation, and immunity from EMI/RFI and lightning.

Highlights
- 20 MHz – 3000 MHz (Model 5200 3 GHz)
- 20 MHz – 6500 MHz (Model 5200 6.5 GHz)
- Up to four flange-mount modules per 1U chassis
- 50 Ohm SMA and 75 Ohm BNC options (Model 5200 3 GHz)
- 50 Ohm SMA (Model 5200 6.5 GHz)
- LNB Power Options 13 v /18 v / 22 kHz (Model 5200 3 GHz)
- Variable RF gains

Applications
- TVRO
- Broadcast
- Earth stations
- Headends
- VSAT
- Wireless/Cellular

EMCORE Commercial Satellite Communications Applications
Satellite Communications

Optiva Platform RF & Microwave Fiber Optic Transport System

EMCORE’s Optiva platform includes a wide range of SNMP managed fiber optic transmitters, receivers, optical amplifiers, RF and optical switches and passive devices, video, audio, data and Ethernet products that provide high-performance fiber optic transmission from 1 MHz to 40 GHz. These units can be used to construct transparent inter- and intra-facility links for short- and long-haul RF satellite and microwave signal transport, antenna remoting, video transport, electronic warfare systems and many other high-dynamic-range applications.

Optiva is a completely modular, hot-swappable platform with a variety of rack-mount and compact tabletop, or wall-mountable enclosure options. EMCORE’s complete line of Optiva insert cards removes the distance limitations of copper-based coaxial systems at cost and performance levels suited for headends, satellite earth stations, military operations centers, and much more.

IF, L- AND S-BAND FIBER OPTIC TRANSPORT

Optiva OTS-1L, 3 GHz Dual Wideband Fiber Optic Links

The Optiva OTS-1L2 is a dual RF fiber optic link that accepts two RF inputs and provides two RF outputs with a single plug-in pair. This dual-density card increases the chassis capacity by a factor of two. OTS-1L2 transmitters and receivers are optimized to perform in the 50 MHz to 3 GHz frequency range providing transparent signal transportation for satellite antenna applications.

Optiva OTS-1L Series Satcom Band Fiber Optic Links

The Optiva OTS-1L series is optimized to provide transparent IF, L- and S-Band signal transport for a variety of satellite antenna and interfacility link applications. Series options include CWDM, DWDM and 1310/1550 nm models supporting links up to 100 km. The unique features of the OTS-1L series include simple push button peaking for optimum performance and our patented SmartGain Control, which ensures consistent performance over varied signal level conditions.

Optiva OTS-2L10, 10 MHz / L-Band Fiber Optic Links

Optiva OTS-2L10, 10 MHz / L-Band Fiber Optic Links are optimized to provide transparent, simultaneous 10 MHz and L-Band signal transport for VSAT antenna applications. The Optiva OTS-2L10 provides excellent isolation of the 10 MHz reference signal from L-Band signals at the transmitter and receiver with very low phase noise, which facilitates greater flexibility to locate VSAT antennas for optimum performance. Connections is via 50 Ohm SMA and the OTS-2L10 includes receiver DC output for the BUC upconverter with transmitter and receiver RF power monitoring via LED, SMA & SNMP.

Satellite Communications

C, X, DIRECT BROADCAST SATELLITE (DBS), KU & KA-BAND FIBER OPTIC TRANSPORT

Optiva OTS-2 Series Satcom Band Fiber Optic Links

The OTS-2 Series Satcom Band Fiber Optic Links are a family of SNMP managed fiber optic transmitters and receivers that provide high-performance downlink and uplink transport within the modular Optiva platform. C, X, DBS, Ku- and Ka-Band modules are available. Optiva satcom band modules utilize EMCORE’s high-performance ultra-low Relative Intensity Noise (RIN) source laser technology with high optical input power capable photodiodes, and feature microprocessor-based transmitter and receiver control for laser and modulator bias. Satcom band modules come with variable RF gain to provide consistent microwave link operations.

Satcom Band Highlights
- Satellite bands: C, X, DBS, Ku, Ka
- Low RIN source laser
- Microprocessor-based transmitter control for laser bias, modulator bias and link gain
- DWDM cooled DFB laser, 10 dBm output
- SNMP and RS-232 monitoring and control

Satcom Band Applications
- Satcom band antenna signal distribution
- Ground terminal & intra-facility links
- Site diversity systems
- Electronic Warfare (EW) systems
- Broadband delay line and signal processing systems

Block Diagram

REFERENCE & TIMING

Optiva OTS-1 Ref Series Reference Oscillator Links

Optiva OTS-1 Reference Oscillator Links are optimized for 1, 5, 10 and 100 MHz high-level reference signal input. Each unit comes with a 15 dB adjustable gain range capability to provide ideal level match for signal distribution. The OTS-1 Ref series features low phase noise and high-dynamic-range, with optically-isolated DFB lasers that run cool and have low power consumption requirements.

Optiva OTS-IRIG Fiber Optic Intra-Facility Links

Optiva OTS-IRIG (Inter-Range Instrumentation Group) B000 / 1 PPS (Pulse Per Second) Fiber Optic Intra-Facility Links provide for simultaneous transmission of IRIG-B000 and 1 PPS, or one signal each over fiber. These high-performance links feature low jitter and sharp rise and fall times.

Satellite Communications
RF & FIBER OPTIC SWITCHING, SIGNAL DISTRIBUTION, NETWORK MANAGEMENT & CONTROL

Optiva OTS-RFS Series Wideband RF Splitters
Optiva OTS-RFS Wideband RF Splitters (RFS) are designed to provide RF signal distribution for satellite antenna applications from 5 MHz to 22 GHz. Band-specific 2.3, 3, 18 and 22 GHz optimized versions are available. The OTS-RFS series provides RF signal distribution to support 1x1 RF fiber link redundancy applications.

Optiva OTS-RSU Series Wideband RF Redundancy Switch Units
Optiva OTS-RSU Wideband RF Redundancy Switch Units (RSU) support satellite signal transport link redundancy applications for 1x1 and 1x4 redundant switch configurations when integrated with Optiva RF fiber optic transmitters and receivers. Band-specific 2.3, 3, 18 and 22 GHz optimized versions are available.

Optiva OTS-1-OSU / OTS-2-OSU 2x2 Dual-Band Optical Switch Units
The Optiva OTS-1-OSU (single switch) and OTS-2-OSU (double switch) units are optimized to perform in the 1310 nm/1550 nm (dual-band) operating wavelengths. The OSU integrated with EMCORE’s family of fiber delay line units provides a wide range of configurable microwave system delay line links for satellite, radar and calibration applications, plus general optical switching for fiber line applications.

Optiva 10/100 & 10/100/1000 Ethernet Network Management Connectivity with EMCOREView Management & Control Suite
The Optiva OTP-1ETR and OTP-1GETR fiber Ethernet links, working together with the Optiva EMCOREView Management & Control Suite (OPV-CTLR-IC), enables network connectivity to remotely and locally monitor and control all the Optiva cards with the EMCOREView GUI. They provide fiber transport connectivity for SNMP network management traffic between remote satellites and control rooms with one channel of duplex 10/100 or 10/100/1000 Ethernet over fiber.

OPTIVA PLATFORM

Splitter & Switching Unit Highlights
- Switching, splitting options to 22 GHz
- 50 & 75 Ohm BNC or 50 Ohm SMA
- 1x1 and 1x4 redundant switch configurations (OTS-RSU)
- Automatic and manual redundancy modes (OTS-RSU)
- Dedicated Comm-link for rapid switch response (OTS-RSU-1 models)
- Single or double 2x2 optical switch units (OTS-OSU)
- SNMP monitoring & control (OTS-RSU, OTS-OSU)

Switch & Splitter Applications
- RF redundant link (OTS-RFS, OTS-RSU)
- Configurable delay system (OTS-1-OSU)
- Optical link switch (OTS-1-OSU)

Ethernet NMS Highlights
- Supports 850/1310/1550 nm, CWDM and DWDM (OTP-1GETR) optics
- Singlemode and multimode options

Ethernet/NMS Applications
- LAN/WAN data transport
- Short and long distance Ethernet
- Temporary data feeds

Multiplexer/Demultiplexer Highlights
- Combine and separate up to 16 different CWDM or DWDM wavelengths onto one singlemode optical fiber
- Minimal optical fiber use for add/drop applications

MUX/DEMUX Applications
- Nodes in dual-redundant fiber rings
- Fiber capacity expansion

Optiva Platform Rack-Mount, Portable & Outdoor Enclosures and Power Supplies

Optiva OT-CC-16F 16-Slot and OT-CC-6 6-Slot 19” Rack-Mount Fan-Cooled Enclosures

The Optiva OT-CC-16F 3 RU and OT-CC-6 1 RU 19” rack-mount, fan-cooled enclosures are ruggedized aluminum housing units that accept any Optiva insert card. Both the 16-slot 3 RU chassis and the 6-slot 1 RU chassis feature hot-swappable power supplies and insert cards and include options for LED indicators for power and status, as well as reversible rack-mounting ears. These high-capacity enclosures provide a state-of-the-art platform for density and space utilization.

Optiva OT-DTCR 1- or 2-Slot Desktop or Wall-Mount Enclosures

The Optiva Desk Top Card Racks (DTCR) are ruggedized portable aluminum housing units that accept any Optiva insert card. The 1-slot (OT-DTCR-1) and 2-slot (OT-DTCR-2) enclosures both use an external PS-9012 wall-mount power supply. These enclosures are perfect for installations that are space constrained, or do not require rackable equipment.

Optiva PS-200F 200 Watt, PS-9060 60 Watt Power Supplies

The Optiva PS-200F 200 Watt Universal Power Supply is designed for the Optiva OT-CC-16F 19” 3 RU rack-mountable enclosure. Each chassis is designed to accommodate up to two redundant PS-200F units. The PS-9060 60 Watt Universal Power Supply is designed for the OT-CC-6 19” 1 RU rack-mountable enclosure. All units are hot-swappable and come in an insert card form-factor. The PS-200F is cooled using an internal fan and its rugged ergonomic design and wide temperature range are geared for industrial applications.

Fiber Optic Amplifiers for Satellite, Microwave & CATV Broadband Applications

ERBIUM DOPED FIBER AMPLIFIERS (EDFA)

Optiva OTS-2O Series EDFA Modules

The Optiva Series Erbium Doped Fiber Amplifier (OTS-2O) and Pre-Amplifier (OTS-2OP) modules are ideal building blocks for system integrators to extend the fiber link for long-haul signal transport. They are designed to meet the most demanding noise performance requirements of fiber optic communications and control systems and perform all the functions required of an optical amplifier for system integration.

The OTS-2O series EDFA provides input and output optical isolation for stable, low noise operation. The input and output optical signal power levels are detected for monitoring and control. The input optical signal is amplified with active gain control for a constant output power level, or with active output power control for constant gain mode operation.

MAFA Series EDFA Gain Modules

EMCORE’s MAFA series EDFA gain modules are designed to meet the most demanding noise performance requirements and perform all the functions required of an optical amplifier for system integration. MAFA series EDFA gain modules provide input and output optical isolation for stable, low noise operation. The input and output optical signal power levels are detected for monitoring and control. The input optical signal is amplified with active gain control for a constant output power level, or with active output power control for constant gain mode operation.

Medallion Series Fiber Amplifiers

The Medallion series of high-performance fiber amplifiers are optimized for the superior output power stability and exceptionally low noise figures demanded by CATV and broadband applications.

Medallion series amplifiers provide very stable optical outputs over a wide operating temperature range. Internally they are supported with input and output isolators for enhanced system stability and performance. Optical power is continuously monitored at the input and output for automatic power control over a wide operating temperature range.

EDFA Highlights

Optiva Series
- Input level: -6 to 12 dBm (OTS-2O), ≥ -45 dBm (OTS-2OP)
- Output level: 14 / 17 / 20 / 23 dBm (OTS-2O), 14 dBm (OTS-2OP)
- Standard and optional gain flatness
- Input/output isolation > 40/40 dB
- Input/output return loss < -40 dB
- Low electrical power consumption
- SNMP and RS-232 monitoring and control

MAFA Series
- Low noise figure (Typ < 4.5 dB)
- Pin: -10 dBm to +12 dBm
- Pout: +14 dBm to +24.5 dBm
- Input/output isolation > 40/40 dB
- RS-232 monitor & control interface
- Compact size for tight space environments

Medallion Series
- High saturation output power
- Dual power supplies, redundant & hot-swappable – AC or DC
- Front panel optical input & output monitor ports
- Wide input dynamic range
- SNMP control interface

EDFA Applications
- Long distance RF/microwave fiber optic communication links
- Sensing and control systems
- High-performance supertrunking links
- High power distribution networks
- Long distance microwave and RF optical fiber distribution systems
- CATV systems
- RFoG and RF overlay for FTTx networks

Microwave Communications

50 MHz TO 40 GHz ULTRA-WIDEBAND FIBER OPTIC TRANSPORT

OTS-2 Series Microwave Band Fiber Optic Links

The OTS-2 Series Unamplified or Amplified (Tx, Rx Fixed Gain) Microwave Band Fiber Optic Links are a family of SNMP managed fiber optic transmitters and receivers that provide high-performance 50 MHz – 40 GHz transport within the Optiva modular platform. 18, 22 and 40 GHz options are available.

Optiva microwave units are tailored to the requirements of higher frequency applications such as microwave antenna signal distribution, electronic warfare systems, broadband delay lines, signal processing, and phased array antennas. Utilizing EMCORE’s high-performance, ultra-low Relative Intensity Noise (RIN) source laser and high optical input power capable photodiodes, these modules provide high-dynamic-range. The system operates at a nominal wavelength of 1550 nm. Wavelength selected lasers on the ITU grid are also available to support multichannel DWDM applications.

Block Diagram

Microwave Transport Highlights

- Low RIN source laser
- High-dynamic-range of >110 dB-Hz²/³
- Microprocessor-based transmitter control for laser bias, modulator bias and link gain
- DWDM cooled DFB laser, 10 dBm output
- SNMP and RS-232 monitoring and control

Microwave Band Applications

- Microwave antenna signal distribution
- Electronic Warfare (EW) systems
- Broadband delay line and signal processing systems
- Frequency distribution systems
- Radar system calibration
- Phased array antenna systems, interferometric antenna arrays

DFB Transmitter Highlights

- High-dynamic-range
- Built-in optical isolator, 1310 nm

Laser Transmitter Applications

- Antenna remoting
- Cellular and PCS networks
- Military tri-band communications
- Tracking, telemetry and control

RACK- & FLANGE-MOUNT DFB LASER TRANSMITTERS

3541C, 10341C 10 - 18 GHz DFB Laser Transmitters

The 3541C and 10341C Distributed Feedback (DFB) Laser Transmitters provide exceptional performance for linear fiber optics communications in very wide bandwidth applications. They offer significant improvements in reliability in microwave communication networks by transmitting the RF signal in its original format.

The 3541C is a flange-mount design for extreme environments and the 10341C is a plug-in for integration with EMCORE’s System 10000 rack-mountable chassis.

>> Please Visit EMCORE.com for More Information and Ordering Details
Small Integrated Transmitter (SITU) and Receiver (SIRU) Units

EMCORE’s Small Integrated Transmitter Units (SITU) are high-performance directly-modulated and externally-modulated transmitters available from 0.05 – 40 GHz. They can be used to construct transparent links for microwave antenna signal distribution, Electronic Warfare (EW) and Ka-Band systems. Other applications include delay lines, signal processing, radar system calibration, phased array antennas and interferometric antenna arrays.

EMCORE’s PIN photodiode-based Small Integrated Receivers Units (SIRU) work with their companion SITU units and are available in 3, 7, 13, 18, 22 and 40 GHz optimized options.

5021T and TR Series DFB Transmitters and Transceivers

The 5021T and TR Series DFB transmitters and transceivers deliver unmatched performance for radar testing, signal processing, phased array antennas and phase noise testing. These rugged devices eliminate many of the problems that are inherent in alternative transceiver technologies. The 5021T, when used in conjunction with an EMCORE fiber optic receivers, offers superior performance. 5021TR series transceivers are designed for use with EMCORE fiber optic delay spools and deliver performance that is superior to acoustic wave and coaxial delay lines.

Flange-Mount Transmitter and Receiver Highlights

SITU SIRU
- Low RIN Source laser, laser and modulator bias control circuit, high optical input power photodiode
- High-dynamic-range of >110 dB-Hz
- Multiple optical output power options
- DWDM operation
- Fully-integrated unit

SITU SIRU Applications
- Microwave antenna signal distribution
- Broadband delay line and signal processing systems
- Frequency distribution systems
- Phased array antenna systems, interferometric antenna arrays

5021T and TR Series
- Bandwidth from 3 GHz to 22 GHz
- Cooled, isolated direct-mod DFB laser
- High-dynamic-range
- -40 to +65 °C operating temperature range
- Flat frequency response and low phase noise

5021T Series Applications
- Radar testing
- Signal processing
- Phased array antenna systems
- Antenna remoting
- Phase noise processing
- Military communications

>> Please Visit EMCORE.com for More Information and Ordering Details
EMCORE’s fiber optic delay lines offer superior performance and provide highly-accurate, repeatable and adjustable electrical time delays. They are available in a variety of ruggedized form-factors and delay lengths of greater than 2,000 μsec are available.

**Optiva OTS-ODLS Internal Fiber Delay Line System**

The Optiva OTS-ODLS Internal Fiber Delay Line System is designed for use with Optiva transmitters, receivers, optical switches and EDFAs within the modular Optiva platform. The optical switches (OTS-1-OSU, OTS-2-OSU) allow for up to four separate delays to be combined and switched with a maximum delay time of 40 μs.

**DLS (Delay Line System)**

EMCORE’s DLS provides convenient RF input/outputs that connect to an internal RF transmitter and RF receiver. Frequency range, delay length and link performance requirements can be tailored over a wide range of performance levels to meet specific requirements. The system is supplied as a complete solution with all modules mounted in 19” racks that use standard AC power.

**5021D Internal and External Fiber Delay Line Systems**

The 5021D Internal and External Fiber Delay Lines are rugged devices that eliminate many of the problems that are inherent in alternative transceiver technologies. The small size allows for a long delay in a compact package with the superior temperature stability of fiber.

Optiva EMCOREView **NextGEN**
Network Management System (NMS) Software

**Optiva EMCOREView Management & Control Suite**

The Optiva EMCOREView Management & Control Suite makes remote monitoring and control of Optiva enclosures and modules simple. Through the utilization of Simple Network Management Protocol (SNMP), EMCOREView works the Optiva EMCOREView Controller Card (Model OPV-CTRL-IC) operating under a uniform software platform which allows for efficient integration with other devices.

The Optiva EMCOREView Controller Card occupies a single slot in any Optiva enclosure and can monitor all cards operating in the chassis. It collects data coming from any Optiva enclosure and the Optiva EMCOREView Network Management System (NMS) software analyzes and displays the data to the user. It can display transmitter optical output, receiver optical input power, chassis alarm, status in real-time, and more. In addition, Optiva EMCOREView monitors and displays card status such as laser and photodiode current, as well as module temperature.

A Management Information Base (MIB) is integrated within the Optiva EMCOREView Controller Card. The MIB collects, stores and provides all information required by the Network Management Software (NMS) to understand the data presented by the Controller Card.

**Highlights**
- Real-time chassis/card information updates
- Three different user level access with password protection
- NEW User-friendly Graphical User Interface
- 10/100/1000 Ethernet monitoring
- Auto detection of signals
- Optical bandwidth analysis system diagnostics
- Alert log
- Supports SNMP V1 V2c and V3
- All user MIB’s
- Supports Android, IOS, MAC OSX, Windows, Linux

**Screen Examples from NEW EMCOREView Graphical User Interface**

EMCORE Satellite & Microwave Communications Heritage

EMCORE is a vertically-integrated manufacturer that pioneered the MOCVD (Metal-Organic Chemical Vapor Deposition) process for both development and production of many of the compound semiconductor-based materials and devices in use today. EMCORE owns and operates a 7,000 square foot semiconductor wafer fabrication plant at our corporate headquarters in Alhambra, California.

EMCORE's vertical integration and differentiated laser platform, based on genuine Ortel linear fiber optic technology, allows us to achieve many variants in optical design. Key elements can be independently optimized supporting customization and faster product design cycles. EMCORE has development, qualification and production capabilities in advanced photonics from prototyping to volume manufacturing.

EMCORE's combination of semiconductor manufacturing expertise and advanced photonics design capability has enabled us to achieve strong penetration in both the commercial and government satellite and microwave communications markets.

Quality Management - ISO 9001 Certified

EMCORE's various manufacturing processes involve extensive quality assurance systems and performance testing. Our manufacturing facilities have all acquired and maintain ISO 9001 certification.

How To Contact
For more information about EMCORE solutions for Satellite & Microwave Communications, visit www.emcore.com, or contact us below.

EMCORE Corporation

North America
2015 Chestnut Street
Alhambra, CA 91803 USA
P +1 626-293-3400
F +1 626-293-3428

Europe, Middle East, Africa, Russia
P +44 7775 560 677

Email
For EMCORE Satellite & Microwave Communications products, email satcom-sales@emcore.com.
