Re: Change of factory location for Butterfly DFB and Linear Externally Modulated Laser module families

Thank you for your continued support of EMCORE products. The physical location of butterfly laser module assembly and test is moving from SVI Public Company Limited in Bangkok, Thailand to Fastrain Technology Malaysia in Penang, Malaysia. There are no changes to production line equipment, material, process or procedures. EMCORE management team is fully engaged with all aspects of transition including equipment setup, training, quality system assurance and ancillary services. The serial numbers of made in Malaysia product will begin with the letter "H". The serial number length and format will remain as is. The unit box label will include the text, "Country of origin: Malaysia". If required, samples available upon request. Production will ramp starting in January 2023. Customers can expect order acknowledgements from either Thailand or Malaysia for the first few months of 2023 as the transition is completed.

Sincerely,

Grant Olecko  
Senior Product Line Director
