

March 3, 2021

Dear Valued Customer:

For many years, customers have depended on Systron Donner Inertial’s (SDI) Horizon “HZ1” single-axis Quartz MEMS rate gyro. Now, due to declining demand for this mature product several purchased components (base, shield, and outer cover) have become obsolete. SDI has initiated a last time buy of these components to support our mutual business through 2022 or when the obsolete components have been consumed, whichever time comes first.

We at SDI truly appreciate your loyal HZ1 business. SDI will do everything we can to maintain HZ1 production capabilities through 2022 on a first in first out (FIFO) order basis. Beyond this period SDI hopes to continue to serve you with our comparable Non-ITAR QRS14 or newer SDG500. Both analog gyros leverage the best features of the HZ1 in newer packages, are in production today and are ideal functional replacement gyros for legacy applications.

Please consult with your SDI-EMCORE Sales and Marketing Manager for details on any of the following:

- QRS14 / SDG500 product features and specifications.
- QRS14 / SDG500 ROM pricing.
